The magref package*

Fábio Fortkamp fabio@fabiofortkamp.com

March 8, 2016

1 Introduction

This document describes the magref package, a collection of macros to facilitate the writing of papers and reports on magnetic refrigeration. It just defines common macros and loads packages that are normally used:

- engsymbols
- sinuitx
- mhchem
- ifthen

Please notice that the user should refer to other references such as papers and textbooks to get the meaning of the symbols I describe here.

2 Implementation

The use of the conditional commands to define these custom macro is because some packages and classes that I use in conjuntion with magref provide some obscure commands that clash with them. A normal user should not have any problems with that.

2.1 Specfic heats

- 1 \newcommand{\cpo}{c_{p,0}}
- 2 \newcommand{\cvo}{c_{v,0}}

2.2 Common refrigeration parameters

- 3 \newcommand{\qe}{\rate{Q}\ped{e}}

^{*}This document corresponds to magref v0.1, dated 2016/03/08.
