The magref package*

1 Introduction

This document describes the magref package, a collection of macros to facilitate the writing of papers and reports on magnetic refrigeration. It just defines common macros and loads packages that are normally used:

- engsymbols
- sinuitx
- mhchem
- ifthen

Please notice that the user should refer to other references such as papers and textbooks to get the meaning of the symbols I describe here.

2 Implementation

The use of the conditional commands to define these custom macro is because some packages and classes that I use in conjuntion with magref provide some obscure commands that clash with them. A normal user should not have any problems with that.

2.1 Common refrigeration and thermodynamic parameters

- $1 \end{\mathbf{Q}} \end{e} \label{eq:lambda}$
- 2 \newcommand{\dtspan}{\Delta{}T\ped{span}}
- 3 \newcommand{\dtsys}{\Delta{}T\ped{sys}}
- 4 \newcommand{\dtreg}{\Delta{}T\ped{reg}}
- $\label{lem:state} 5 \ensuremath{\w}_{\alpha} \ensuremath{\w}_{\alpha} \ensuremath{\alpha} \ensuremath{\a$
- 6 \newcommand{\wpump}{\w\ped{pump}}

^{*}This document corresponds to magref v0.4?, dated 2019/04/22.
